

Force Gauge cum Weld Analyser FGWA 6010 / FGWA 6020 / FGWA 6050

The **Force Gauge cum Weld Analyser** is microcontroller-based compact & lightweight instrument for accurate measurements of Electrode Forces and Weld Currents.

Features:

- User friendly interface,
- Big graphic fonts with backlight,
- Four keys only to operate 128 x 64 graphics LCD display with backlight,
- AC & DC current measurement & Force measurement,
- Weld analysis up to every half (10 ms.) cycle,
- Measures weld current, weld time (cycle/ms), conduction angle, number of pulses in the weld,
- Force measurement in Kg, lb, kN,
- Suitable for 12 32 mm Dia Tip / Shank / Holder,
- Small and light weight.

Specifications:

FGWA 6010 = Range 60KA for Current & 1 Ton for Force Gauge. FGWA6020 = Range 60KA for Current & 2 Ton for Force Gauge. FGWA6050= Range 60KA for Current & 5 Ton for Force Gauge. Welding current, weld time and conduction time of 50/60 Hz AC Force in Kgs and lbs , kN Detection of welding current & Detection by the 'current detection coil' (CT) on the secondary side the welding machine. Detection by the Force with Load cell Current – Average RMS value for each weld pulse Force as per model up to 5 Ton Welding current 2 to 60.0KA Welding time 2 to 60.0KA Measurement 30 – 180° Welding current +/-2% KA Weld time 0% Conduction angle +/-5% Force +/- 10 Kg The Display Method of The average data of welding time, RMS welding current, conduction	e of	
FGWA6050= Range 60KA for Current & 5 Ton for Force Gauge. Welding current, weld time and conduction time of 50/60 Hz AC Force in Kgs and lbs , kN Detection of welding current & Force in Kgs and lbs , kN Detection by the 'current detection coil' (CT) on the secondary side the welding machine. Detection by the Force with Load cell Current – Average RMS value for each weld pulse Force as per model up to 5 Ton Welding current 2 to 60.0KA Welding time 2 to 60.0KA Welding time 30 – 180° Welding current +/-2% KA Weld time 0% Conduction angle +/-5% Force +/- 10 Kg		
Welding current, weld time and conduction time of 50/60 Hz AC Force in Kgs and lbs , kN Detection of welding current & Force in Kgs and lbs , kN Detection by the 'current detection coil' (CT) on the secondary side the welding machine. Detection by the Force with Load cell Current – Average RMS value for each weld pulse Force as per model up to 5 Ton Welding current 2 to 60.0KA 0.5 to 99.5 cycle (Resolution: 0.5 cycle) 1- 1999 ms (Resolution: 1 ms) Conduction angle 30 – 180° Welding current +/-2% KA Weld time 0% Conduction angle +/-5% Force +/- 10 Kg		
Object of Measurement Force in Kgs and lbs , kN Detection of welding current & Detection by the 'current detection coil' (CT) on the secondary side the welding machine. Detection by the Force with Load cell Current – Average RMS value for each weld pulse Force as per model up to 5 Ton Welding current 2 to 60.0KA Welding time 0.5 to 99.5 cycle (Resolution: 0.5 cycle) 1- 1999 ms (Resolution: 1 ms) Conduction angle 30 – 180° Welding current +/-2% KA Weld time 0% Conduction angle +/-5% Force +/- 10 Kg		
Force in Kgs and lbs , kN Detection of welding current & Detection by the 'current detection coil' (CT) on the secondary side the welding machine. Detection by the Force with Load cell Current – Average RMS value for each weld pulse Force as per model up to 5 Ton Welding current 2 to 60.0KA Welding time 0.5 to 99.5 cycle (Resolution: 0.5 cycle) 1- 1999 ms (Resolution: 1 ms) Conduction angle 30 – 1800 Welding current +/-2% KA Weld time 0% Conduction angle +/-5% Force +/- 10 Kg		
Force the welding machine. Detection by the Force with Load cell Current – Average RMS value for each weld pulse Force as per model up to 5 Ton Welding current 2 to 60.0KA Welding time 0.5 to 99.5 cycle (Resolution: 0.5 cycle) 1- 1999 ms (Resolution: 1 ms) Conduction angle 30 – 180° Welding current +/-2% KA Weld time 0% Conduction angle +/-5% Force +/- 10 Kg		
Force as per model up to 5 Ton	es)	
Measurement Welding current 2 to 60.0KA Welding time 0.5 to 99.5 cycle (Resolution: 0.5 cycle) 1- 1999 ms (Resolution: 1 ms) Conduction angle Welding current +/-2% KA Weld time 0% Conduction angle +/-5% Force +/- 10 Kg	les)	
Welding time 0.5 to 99.5 cycle (Resolution: 0.5 cycle) 1- 1999 ms (Resolution: 1 ms) Conduction angle 30 – 180° Welding current +/-2% KA Weld time 0% Conduction angle +/-5% Force +/- 10 Kg	les)	
Welding time 0.5 to 99.5 cycle (Resolution: 0.5 cycle 1- 1999 ms (Resolution: 1 ms)	les)	
1- 1999 ms (Resolution : 1 ms)		
Welding current		
Measurement accuracy. Weld time Conduction angle +/-5% Force +/- 10 Kg		
Measurement accuracy. Conduction angle +/-5% Force +/- 10 Kg		
Conduction angle +/-5% Force +/- 10 Kg		
1 2 2 3		
The Display Method of The average data of welding time RMS welding current conduction		
Measurement Data angle , & Force is displayed on 128 x 64 Graphics LCD.	on	
Charging Time About 5 hours		
Operation Time Continuous 6 – 7 hours		
Power consumption During operation : 63mA		
Overall dimensions 180mm (h) x 85mm (w) x 35mm (d)		
Weight of Box, C.T, Force Gauge, Charger & Bag About 3.5Kg		
Operation Temperature 0- 55° C		
Operation Humidity 10 – 90% (No dew)		
Durable Plastic Bag		
Measuring Unit for Force & Current		
Accessories in Easy Carry Case CT Coil	CT Coil	
Force gauge		
Charger
